

# Project Euler #76: Counting summations

## Problem Statement

This problem is a programming version of [Problem 76](#) from [projecteuler.net](#)

It is possible to write five as a sum in exactly six different ways:

$$\begin{aligned}4 + 1 \\3 + 2 \\3 + 1 + 1 \\2 + 2 + 1 \\2 + 1 + 1 + 1 \\1 + 1 + 1 + 1 + 1\end{aligned}$$

How many different ways can  $N$  be written as a sum of at least two positive integers?

As answer can be large, print  $\%(10^9 + 7)$

## Input Format

First line of the input contains  $T$ , which is number of testcases.  
Each testcase contains  $N$ .

## Constraints

$$\begin{aligned}1 \leq T \leq 100 \\2 \leq N \leq 1000\end{aligned}$$

## Output Format

Print the output corresponding to each testcase on a new line.

## Sample Input

```
2
5
6
```

## Sample Output

```
6
10
```
